

Norsat Launches Family of Very Low Noise Amplifiers

High Definition, Bandwidth Intensive and Mission Critical Applications Demand Very Low Noise Amplifiers

(Vancouver, Canada) April 16th, 2007 – Norsat International Inc. (TSX – NII.TO; OTC BB – NSATF.OB) announced today that it has launched a commercial line of very Low Noise Amplifiers (“LNAs”) optimized for high definition, bandwidth intensive and mission critical applications. The new LNA family is ideally suited for applications where consistent low noise performance is critical.

“These precision-engineered LNAs are ideal for high definition applications and are designed for easy integration into the receive chains of a wide variety of satellite terminals from cable head ends to hardened military earth stations,” said Dr. Amiee Chan, President and CEO, Norsat International Inc. “The LNA series boast the industry’s most impressive noise figures, linearity and gains; and complements our BDC line of products.”

The LNA family of products is available in the Ku, Ka, C and X-band frequencies. Additional performance characteristics include a very low noise temperature and a DC current of 200 mA. The LNAs can be customized to meet project requirements.

The new LNAs will on display at the company’s booth, # C8547, in the Satellite Technologies Hall, at NAB (National Association of Broadcasters) 2007 at the Las Vegas Convention Center.
